

Cotton Balls

Instructions For Use

Product General Description

- Made from superior quality 100% natural fiber.
- Bleached without chlorine or chlorine derivatives, acidity and alkalinity free to guarantee the maximum quality of the product and protect the environment.
- Soft and gentle to the skin, snow white in color.

Intended Use

1. **A cotton ball is a ball of soft fiber that is primarily used for medical or cosmetic purposes but can be used for other purposes such as arts and crafts or cleaning. Although the cotton can be used in its natural form, the fibers can be spun into other products such as bed sheets and clothing or refined and sterilized for everyday and medical uses.**
2. **Cotton balls have multiple uses in the medical field including cleaning out wounds with hydrogen peroxide or iodine, applying topical ointments such as salves and creams, and stopping blood after a shot is given. Surgical procedures also require their use for soaking up internal blood. Also, they are used to pad a wound before it is bandaged.**
3. Using cotton balls for application and removal of cosmetics is another popular use. Foundations, bronzers, powders, and blushes are sometimes applied with this product, as is nail polish remover. Because cosmetic cotton balls are sterile, they are a great tool for removing eye makeup with special remover or applying skin care products such as astringents and toners. When people choose to use cotton products on their faces, they avoid touching their skin with their fingers which can lead to unpleasant blemishes.
4. In addition to medical and cosmetic uses, cotton balls may be used for other non-traditional uses, such as cleaning. When cleaning small areas that are hard to reach, the flexibility of a cotton ball will allow reaching such areas as behind a faucet or any other place that a sponge won't fit into. If a child has diaper rash, cotton is softer than a rag and are used to help wash the baby's bottom.
5. Cotton balls may also be used for a number of art and craft projects, such as a bunny's tail, Santa's beard, clouds, spider webs, fog, and snow. Snowmen, lambs or sheep may also be made with these products. Painting or ink stamping with a cotton ball will give an original stroke or print when trying to create the appearance of texture.

Directions for Use

1. Select suitable specification according to intended purpose of patient.
2. Check the integrity of package, confirm whether within the term of validity.
3. Wash hands clearly and put on medical glove or use forceps to take out the absorbent cotton ball.
4. Put the absorbent cotton ball to absorb the blood or water.
5. Dispose the used absorbent cotton ball to medical garbage.
6. If the absorbent cotton ball should be applied directly to the wound, then make it sterilized before using.
